

Product Information

The Problem:

Rain, sun and street grime affect the appearance of each machine. Black engine parts, in particular, are often exposed to bleaching, which leads even well maintained motorcycles to quickly loose the brilliance of their black colour.

The Solution:

COLOUR REFRESHER

Product Advantages:

Refreshes faded surfaces!
e.g. greyed engine parts, plastic materials, rubber, etc.

- Refreshes bleached parts and provides colour depth and a semi gloss finish
- Heat resistant, stainless drying and holds up to rain and several motorcycle washes
- Protects from (further) fading caused by UV radiation

Application Areas:

Bleached metal parts, painted and unpainted plastic materials, rubber, etc.

S100 Colour Refresher serves to improve the visual appearance of:

- Greyed and bleached painted and unpainted motorbike metal parts (e.g. engine block, frame, linkage, engine side caps, rims)
- Bleached rough and painted plastic and rubber parts (e.g. side covers, inner cladding, mudguards, controls and instruments, carbon parts, top case, plastic suitcase, blinker, mirror, etc.)

Application:

Wash the motorbike thoroughly with S100 Total Cleaner Plus and rub it dry with a leather cloth. Shake the product well and spray on sparsely and evenly from a distance of around 20cm. Let dry.

Note: Apply the product on rims, covers, instruments, etc. with a soaked cloth only in order to protect adjacent surfaces that must not be treated (tyres, seat bench, tachometer covers). Do not spray on these parts!

When treating glazed plastic parts, such as covers, wipe with an absorptive cloth after product application.

Tip:

Ideal accessories: S100 Sauber Sepp chain spray splash guard
