

Product Information

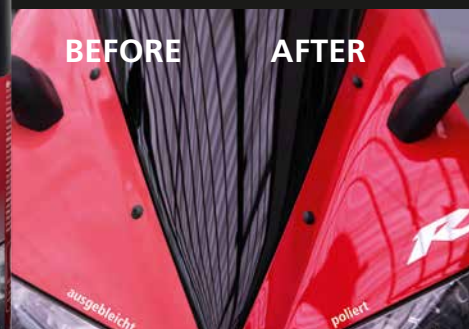

The Problem:

High-quality metal parts treated with various lacquers, as well as painted or coloured plastic materials and plexiglass screens for cover parts are increasingly used for motorbikes. In contrast to passenger vehicles, these parts are exposed to high stress every day. Insufficient or improper care can cause these surfaces to quickly lose their gloss and shiny finish.

The Solution:

PAINT-/PLASTIC POLISH

Product Advantages:

Deep gloss on all smooth surfaces

- Removes fine scratches and matte spots
- Refreshes the colour
- Easy to use
- Efficient and easy application
- Solvent-free
- Water-repellent

Application Areas:

Surfaces on motorbikes and scooters

- Painted metal parts (plain-colour, multicolour and metallic lacquers)
- Painted smooth plastic parts
- Plexiglass screens
- Weathered and new lacquers
- Painted rims
- Decals (does not loosen decals)
- Airbrush paintings

Application:

Shake well before use. Depending on the soil level, clean the motorbike with S100 Total Cleaner Plus, if required. Apply the polishing product sparsely with a cloth or polishing wad. Let dry shortly and finally polish away with a terry cloth.

Note: Store in a frost-protected place.

Tip:

For the protection and sealing of all surfaces we recommend S100 Gloss Wax Spray.
