

Product Information

The Problem:

Until now, there were no care products for matt and glossy leather that could both maintain natural appearance and restore important nutrients in the leather. Without additional nutrients leather can become rough and brittle, and their colours can fade.

The Solution:

Product Advantages:

Perfect moisture protection with beeswax

- For all smooth leather types and colours (including perforated leather)
- Matt leather remains matt and glossy leather remains glossy
- Keeps the leather smooth and supple for longer
- Maintains the breathability of climate membranes
- Intensive colour refreshment without a greasy shine
- Also ideal for synthetic leather

Application Areas:

All smooth leather types and colours, matt and glossy leather incl. TFL-Cool®, synthetic leather and perforated leather

Recommendation:
S100 Leather Care Cloth for gentle and lint-free use

Application:

Spray S100 leather care onto the clean and dry leather and use the S100 Leather Care Cloth to spread it evenly over the leather. Use the cloth to wipe excess leather care off after a short application time (5-10 min).

Note: Try first on a small less visible place to check for colourfastness and fading. Follow the clothing manufacturer's care instructions. Do not use on suede leather or nubuck leather.

Tip:

Before treatment, we recommend cleaning the leather with S100 Leather Cleaner to optimally prepare the leather for the leather care product.
